"PROTEON: BOTULINUS TOXIN ACTS BY INHIBITING NEUROTRANSMITTER

RELEASE. IT BINDS TO PERIPHERAL NEURONAL SYNAPSES, IS INTERNALIZED

AND MOVES BY RETROGRADE TRANSPORT UP THE AXON INTO THE SPINAL CORD

WHERE IT CAN MOVE BETWEEN POSTSYNAPTIC AND PRESYNAPTIC NEURONS. IT

INHIBITS NEUROTRANSMITTER RELEASE BY ACTING AS A ZINC

ENDOPEPTIDASE THAT CATALYZES THE HYDROLYSIS OF THE 180-ARG-)-ILE-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    181 BOND IN SNAP-25.
-!- CATALYTIC ACTIVITY: Limited hydrolysis of proteins of the neuroexocytosis apparatus, synaptobrevins, SNAP-25 or syntaxin. No detected action on small molecule substrates.
-!- COFACTOR: Binds 1 zinc ion per subunit (By similarity)
-!- SUBUNIT: DISOULIPEDE-LINKED HEFERODIMER OF A LICHT CHAIN (L) AND HEAVY CHAIN (H). THE LICHT CHAIN HAS THE PHARMACOLOGICAL ACTIVITY, WHILE THE N-AND C-TERMINAL OF THE HEAVY CHAIN MEDIATE CHANNEL FORMATION AND TOXIN BINDING, RESPECTIVELY.
                                                                                                        SEQUENCE OF 1-251 FROM N.A.

"Organization and phylogenetic interrelationships of genes encoding components of the botulinum toxin complex in proteolytic Clostridium botulinum types A. B. and F: evidence of chimeric sequences in the gene encoding the nontoxic nonhemagglutinin component.";
Int. J. Syst. Bacteriol. 46:1105-1112(1996).

-I- FUNCTON: Inhibits acetylcholine release. The botulinum toxin binds with high affinity to peripheral neuronal presynaptic membrane, is then internalized by receptor-mediated endocytosis. The C-terminus of the heavy chain (H) is responsible for the adherence of the toxin to the cell surface while the N-terminus mediates transport of the light chain from the endocytic vesicle
                                                                                                                                                                                                                                                                                                                                                                               Gaps
Williams C.F., Inoue T., Lucus A.-M., Zanotto P., Roy'P.;
"The complete sequence of four major structural proteins of African horse sickness virus serotype 6: evolutionary relationships within and between the orbiviruses.";
                                                      Virus Res. 53:53-73(1998).

-1- FUNCTION: THE VP2 PROTEIN IS ONE OF THE TWO PROTEINS (WITH VP5)
WHICH CONSTITUTE THE VIRUS PARTICLE OUTER CAPSID. IT IS THE
MAJOR TARGET OF THE HOST IMMUNOGENIC RESPONSE.

-!- FUNCTION: BOTULINUS TOXIN ACTS BY INHIBITING NEUROTRANSMITTER

RELEASE. IT BINDS TO PERFIPHERAL NEURONAL SYNAPSES, IS INTERNALIZED

AND MOVES BY RETROGRADE TRANSPORT UP THE AXON INTO THE SPINAL CORD

WHERE IT CAN MOVE BETWEEN POSTSYNAPTIC AND PRESYNAPTIC NEURONS. IT

INHIBITS NEUROTRANSMITTER RELEASE BY ACTING AS A ZINC

ENDOPEPTIDASE THAT CLEAVES THE 76-GLN-|-PHE-77 BOND OF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       -!- CATALYTIC ACTIVITY: Limited hydrolysis of proteins of the neuroexocytosis apparatus, synaptobrevins, SNAP25 or syntaxin. No detected action on small molecule substrates.
-!- COFACTOR: Binds 1 zinc ion per subunit (By similarity).
-!- SUBUNIT: DISULFIDE-LINEED HETERODIMER OF A LIGHT CHAIN (L) AND A HEAVY CHAIN (H). THE LIGHT CHAIN HAS THE PHARMACOLOGICAL ACTIVITY, WHILE THE N-ND C-TERMINAL OF THE HEAVY CHAIN MEDIATE CHANNEL FORMATION AND TOXIN BINDING, RESPECTIVELY.
-!- SUBCELLULAR LOCATION: Sceneted.
-!- MISCELLANEOUS: THERE ARE SEVEN ANTIGENICALLY DISTINCT FORMS OF BOTULINUM NEUROTOXIN: TYPES A, B, Cl, D, E, F, AND G.
                                                                                                                                                                                                                                                               IDENTIFICATION OF SUBSTRATE.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Struct. Biol. 5:898-902(1998).
FUNCTION: Inhibits acetylcholine release. The botulinum toxin binds with high affinity to peripheral neuronal presynaptic membrane, is then internalized by receptor-mediated endocytosis. The C-terminus of the heavy chain (H) is responsible for the adherence of the toxin to the cell surface while the N-terminus mediates transport of the light chain from the endocytic vesicle to the cytosol. After translocation, the light chain (L) hydrolyzes the 197-Gln-|-Arg-198 bond in SNAP-25, thereby blocking
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Binz T., Blasi J., Yamasaki S., Baumeister A., Link E., Suedhof T.C., Jahn R., Niemann H.;

Mucleotide sequence of the gene coding for Clostridium botulinum
(Clostridium argentinense) type G neurotoxin: genealogical comparison
with other clostridial neurotoxins.";

1- FUNCTION: BOTULINUS TOXIN ACTS BY INHIBITING NEUROTRANSMITTER
RELEASE. IT BINDS TO PRIPHERAL NEURONAL SYNAPSES, IS INTERNALIZED
AND MOVES BY RETROGRADE TRANSPORT UP THE AXON INTO THE SPINAL CORD
WHERE IT CAN MOVE BETWEEN POSTSYNAPTIC AND PRESYNAPTIC NEURONS. IT
INHIBITS NEUROTRANSMITTER RELEASE BY ACTING AS A ZINC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         -!- CATALTITIC ACTIVITY: Limited hydrolysis of proteins of the neuroexocytosis apparatus, synaptobrevins, SNAP25 or syntaxin. No detected action on small molecule substrates.
-!- COFACTOR: Binds 1 zinc ion per subunit (By similarity).
-!- SUBUNIT: Disulfide-linked heterodimer of a light chain (L) and a heavy chain (H). The light chain has the pharmacological activity, while the N- and C-terminal of the heavy chain mediate channel formation and toxin binding, respectively.
-!- SUBCELLULAR LOCATION: Secreted (By similarity).
-!- SUBCELLULAR LOCATION: SEVER ANTIGENICALLY DISTINCT FORMS OF BOTULINUM NUBUROTOXIN: TYPES A, B, Cl. D, E, F, AND G.

                                                                                                                                                                                  A.Molecule type: protein
A.Residues: 2-31 <DEF>
C.Comment: The source of this protein was an extrachromosomal plasmid.
C.Comment: The source of this protein was an extrachromosomal plasmid.
C.Comment: The precursor is cleaved by endogenous proteinase activity to form light (fradual chains are not toxic when separated). The amino end of the heavy chain (fragment B) C.Comment: Fragment B forms ion channels in a lipid bilayer. Fragment C binds to ganglic C.Comment: This potent neurotoxin binds to peripheral neuronal synapses, is internalized presynaptic neurons. It inhibits neurotransmitter release by proteclytic cleavage of sy C.Function:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         C.Fonotion:
A.Description: blocks neuroexocytosis via hydrolysis of a Gln-Phe peptide bond in synapt
C.Superfamily: tetanus toxin
C.Superfamily: tetanus toxin
C.Superfamily: tetanus toxin
C.Superfamily: tetanus predicted <TL>
F.2-457/Product: tentoxylysin light chain (fragment A) #status predicted <TL>
F.461-1315/Product: tentoxylysin heavy chain (fragment B.C) #status experimental <TTH>

The present sequence represents a peptide immunogen comprising an invasin domain immunostimulatory peptide of Versinia sp., a synthetic helper T cell (Th) epitope and a target antigen, luteinising bormone-releasing hormone (LHRH). The synthetic The epitope is derived from the structured synthetic antigen library (SSAL) designated SSAL1 Th1. SSAL Th1 is modelled after a promiscuous epitope taken from the F protein of the Measles virus. The peptide immunogens cause induction of a specific immune response to LHRH which is involved in regulation of specific immunes. Provision of a promiscuous T helper epitope (which is functional in genetically diverse subjects) provides optimum (C functional in genetically diverse subjects) provides optimum (C inmunogenicity to the B cell epitopes of the target antigen man thus chip antibody titres against the target antigen. The peptide immunogens of the invention are used to vaccinate against mammalian LHRH, for use as (reversible) contraceptive; control of hormone-dependent tumours (cancer of prostate or breast, also endometriosis); to prevent boar actinit (and improve meat quality) and for immunocastration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         hepatitis B virus surface antigen; HBV; immunogenic; B-cell epitope; luteinising hormone releasing hormone; LHRH; contraceptive; anticancer; somatostatin; growth promotion; CD4 receptor; HIV-1; antiviral; FMDV; foot and mouth disease virus; immunoglobulin E; IgE; anti-allergic; Plasmodium falciparum; circumsporozoite; antimalarial; CEPP; cholesteryl ester transport protein; anti-arteriosclerotic.

c immunocastration); for promoting the growth of animals; or for immunocastration); for promoting the growth of animals; or torating allergies or arteriosclerosis. Incorporation of a promiscuous of the functional in genetically diverse subjects) into an immunogen consistence a strong T helper cell-mediated immune response, resulting in production of antibodies against a target carrier proteins and pathogen-derived T helper ceptropes. Sequence AAY91121 represents a promiscuous T helper epitope from the measles virus F (MVF) protein and sequences AAY91122 represents a promiscuous Th epitope from the measles virus F (MVF) protein and sequences AAY91121 represents a promiscuous Th epitope from the meastles virus (HWY) surface antigen, and sequence AAY91141 represents a promiscuous Th epitope at AAY91142 are synthetic epitopes derived from this HBV epitope. AAY91149, surface antigen, and sequence AAY91149, surface antigen, and sequence AAY91149, souther contributed from this HBV epitope. AAY91197 are synthetic epitopes derived from this HBV epitope. AAY91197 comprising an LHRH sequence joined to a promiscuous Th epitope. AAY91197 comprising sometostatin, and AAY91201-Y91207 are antigenic peptides comprising sometostatin, and a Th epitope. Sometostatin and a Th epitope. Sometostatin and AAY91201-Y91204 south of a human IgE (Ammunogens may be used to promote growth in livestock. AAY91208 is a poptide derived from an antigenic site, and AAY91209-Y90211 are MH Th epitope. AAY91220 is a peptide derived from foot and mouth disease virus (FMDV) VPI capsid protein and AAY91221-Y91225 comprise the CS antigen and an AAY91220 is a plasmodium falciparum circumsporozolie (SS) target antigen, and AAY91222-Y91241 are immunogens comprising a certipope which may be used to prevent or treat antigen, and AAY91222-Y91241 are immunogens comprising a present certipope and may be used in an allaria vaccine. AAY91225 and AAY91225-Y91241 are mallarial vaccine and AAY91232-Y91241 are immunogens comprising a present certipope and may be used 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAY91258-Y91273 are antigenic peptides comprising MVH Th and HIV-1 B-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        protein epitope from Yersinia species, and hinge spacer pertide, both of which may optionally be used in the antigenic peptides of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to novel promiscuous T helper cell epitopes (Th), and immunogenic peptides comprising the Th epitopes of the invention along with B cell epitopes. The Th epitopes and peptide immunogens containing them, are used to induce a T helper cell response, specifically against Plasmodium falciparum, cholesteryl ester transport protein (CETP) or HIV epitopes, but more generally against any pathogen, immunoreactive self-antigen or tumour antigen. The Th epitopes and peptide immunogens may be used for prevention and/or treatment of infections (HIV, foot-and-mouth disease or malaria); for cancer immunotherapy; for inhibition of the action of luteinising hormone
                                                                                                                                                                                                                                                                                                                                                     New artificial T helper cell epitope and derived immunogens with target antigenic site, for immunization against e.g. malaria, arteriosclerosis or human immune deficiency virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAY91198 and AAY91199 are respectively an immunostimulatory invasin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    epitope which may be used as a component in an anti-HIV-1 vaccine

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to novel promiscuous T helper cell epitopes (Th),
and immunogenic peptides comprising the Th epitopes of the invention
closed with B cell epitopes. The The pitopes and peptide immunogens
containing them, are used to induce a T helper cell response,
containing them, are used to induce a T helper cell response,
specifically against Plasmodium falciparum, cholesteryl ester transport
containing (CEPP) or HIV Pitopes, but more generally against any pathogen,
immunoreactive self-antigen or tumour antigen. The Th epitopes and
peptide immunogens may be used for prevention and/or treatment of
containing the infection (HRH) for contraception, treatment of hormone
containing hormone (LHRH) for contraception, treatment of hormone
containing allergies or arteriosclerosis. Incorporation of a promiscuous
contracting allergies or arteriosclerosis. Incorporation of a promiscuous
contracting allergies or arteriosclerosis. Incorporation of a promiscuous
contracting in production of antibodies against a target
contracting and anyll21 represents a promiscuous T helper epitopes
contracting and anyll21 represents a promiscuous T helper epitopes
contracting and anyll21 represents and pathogen-derived on the

WYE Th epitope. Sequence AAY91143 represents a promiscuous Th epitope from hepatitis B virus (HBV) surface antigen, and sequences AAY91155 are synthetic epitopes derived from this HBV epitope. AAY91227 and AAY91242-791244 are antigenic peptides comprising an LHRH sequence joined to a promiscuous Th epitope. AAY91197 comprising an LHRH sequence joined to a promiscuous Th epitope. AAY91200 is somatostatin and a Th epitope. Somatostatin comprising somatostatin and a Th epitope. Somatostatin comprising somatostatin and a Th epitope. Somatostatin comprising somatostatin and a Th epitope. Somatostatin compresses may be used to promote growth, in livestock. AAY91208 is a human CD4 CDR2-like domain antigenic site, and AAY91209-Y90213 are MH Th epitope/CD4 CDR2 antigenic peptides which may be used to prevent HIV common CD4 CDR2-like domain, and AAY90213 is a modified version of a human IgE (immunoglobulin E) CH3 domain, and AAY90213-Y90219 are Th epitope/IgE CH3 antigenic peptides which may be used in the treatment of allergies. AAY91221-Y91222 comprise this peptide and a Th epitope, and AAY91221-Y91222 comprise this peptide and a Th epitope and may be used in a malaria vaccine. AAY91228-Y91231 represent comprise, and AAY91231 represent comprise, and AAY91231 and AAY91228-Y91231 and AAY91257-Y91257 are HIV-1 neutralising B-cell epitopes, and AAY91248-Y91251 and AAY91257-Y91257 are HIV-1 neutralising B-cell epitopes. AAY91241 and AAY91251 and AAY91257-Y91257 and HIV-1 may be used as a component in an antiquence comprising WH Th and HIV-1 B-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Helper T cell epitope; F protein; Measles virus; peptide immunogen; LHRH;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     epitope which may be used as a component in an anti-HIV-1 vaccine. AAY91198 and AAY91199 are respectively an immunostimulatory invasin protein epitope from Yersinia species, and hinge spacer peptide, both of which may optionally be used in the antigenic peptides of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      luteinising hormone_releasing hormone; spermatogenesis; ovulation; oestrus; sexual development; sex hormone; promiscuous T helper epitope; vaccine; contraceptive; hormone-dependent tumour; prostate cancer; breast cancer; endometriosis; boar taint; meat quality;

New artificial T helper cell epitope and derived immunogens with target antigenic site, for immunization against e.g. malaria, arteriosclerosis or human immune deficiency virus

Example 1; Page 81; 129pp; English.

The invention relates to novel promiscuous T helper cell epitopes (Th), and immunogenic peptides comprising the Th epitopes of the invention along with B cell epitopes. The Th epitopes and peptide immunogenic peptides comprising the The pitopes of the invention and or along with B cell epitopes. The The peitopes of the invention and or containing them, are used to induce a T helper cell response. Specifically against Plasmodium falcabear or malarial specifically against Plasmodium falcabear or malarial specifically appations or containing them or theorem in the Thepitopes and peptide immunogens may be used for prevention and/or treatment of infections (HIV, foot-and-mouth disease or malarial); for cancer immunoctherapy; for inhibition of the action of luteinising hormone clarent prevention of boar taint in meat, and manunoes and patentics or arterioscelerosis. Incorporation of a promiscuous of immunocastration); for promoting the growth of animals or for treating alterates or arterioscelerosis. Incorporation of a promiscuous of the functional in genetically diverse subjects) into an immunogen improves capacity to induce a strong T helper cell-mediated immune response, resulting in production of antibodies against a target or from the measles virus F (WFF) protein and sequence AAY9112. represents a promiscuous T helper cell-mediated immune response, resulting in production of antibodies against a target optiopes. Sequence AAY91143 represents a promiscuous The pitope Comprise. Sequence AAY91143 represents a promiscuous The pitope Comprise. Sequence AAY91144 represents a promiscuous The pitope Comprise. Sequence AAY91144 represents a promiscuous The pitope Comprise. Sequence AAY91144 represents a promiscuous The pitope Comprising an LiHR sequence joined to a promiscuous The pitope. AAY91197 are synthetic epitopes derived from this HBV epitope. Sequence AAY91144 represents a promiscuous The pitope Comprising an LiHR sequence joined to a promiscuous The pitope. AAY91201 is a peptide sea for promote growth in livesto are HIV-1 neutralising B-cell epitopes, and AAV91248 r91251 and AAV91258-Y91273 are antigenic peptides comprising WVH Th and HIV-1 B-cell epitope which may be used as a component in an anti-HIV-1 vaccine. AAV91198 and AAV91199 are respectively an immunostimulatory invasin protein epitope from Yersinia species, and hinge spacer peptide, both of which may optionally be used in the antigenic peptides of the ö

antigen, and AAY91224-Y91225 comprise the CS antigen and an MVF The epitope and may be used in a malaria vaccine. AAY91228-Y9121 represent cerp-derived peptides and AAY9122-Y91241 are immunogens comprising a CETP-derived peptide and a Th epitope which may be used to prevent or treat arteriosclerosis and cardiovascular disease. AAY91247 and AAY91251 and AAY91258-Y91251 and AAY91258-Y91273 are antigenic peptides comprising MWF Th and HIV-1 B-cell epitope which may be used as a component in an anti-HIV-1 vaccine. AAY91199 are respectively an immunostimulatory invasin protein epitope from Yersinia species, and hinge spacer peptide, both of which may optionally be used in the antigenic peptides of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       containing them, are used to induce a T helper cell response, specifically against Plasmodium falciparum, cholesteryl ester transport protein (CETP) or HIV epitopes, but more generally against any pathogen immunoreactive self-antigen or tumnur antigen. The PI epitopes and peptide immunogens may be used for prevention and/or treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Promiscuous T-cell epitope; measles virus F protein; MVF; hepatitis B virus surface antigen; HBV; immunogenic; B-cell epitope; luteinising hormone releasing hormone; LHRH; contraceptive; anticancer; somatostatin; growth promotion; CD4 receptor; HIV-1; antiviral; FMDV; foot and mouth disease virus; immunoglobulin E; IgE; anti-allergic; plasmodium falciparum; circumsporozocite; antimalaria; CETP; cholestery! ester transport protein; anti-arteriosclerotic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New artificial T helper cell epitope and derived immunogens with target antigenic site, for immunization against e.g. malaria, arteriosclerosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to novel promiscuous T helper cell epitopes (Th), and immunogenic peptides comprising the Th epitopes of the invention along with B cell epitopes. Sequence AAY91121 represents a promiscuous T helper epitope from the measles virus F (MVF) protein and sequences AAY91122-Y91146, represents a promiscuous Theiper epitope. AAY91245-Y91246 represents synthetic Thepitopes based on the MVF Th epitope. Sequence AAY91143 represents a promiscuous Thepitope. From hepatitis B virus (HBV) surface antigen, and sequences. AAY91155 are synthetic epitopes derived from this HBV epitope. AAY91156-Y91196, AAY912027 and AAY91242-Y91244 are antigenic peptides. AAY91166-Y91196, AAY91201 somatostatin, and AAY91201-Y91207 are antigenic peptides. Comprising somatostatin, and AAY91201-Y91207 are antigenic peptides comprising somatostatin and a Thepitope. Somatostatin chuman CD4 CDR2-like domain antigenic site, and AAY91209-Y90211 are MVH Thepitope/CD4 CDR2 antigenic peptides which may be used to prewent HIV investor. AAY991208 is a human CD4 CDR2 antigenic peptides which may be used to prevent HIV infection of T cells. AAY90212 is a modified version of a human IGE (immunoglobulin E) CH3 domain, and AAY90213-Y90219 are Th epitope/IGE CH3 antigenic peptides which may be used to prevent endingent peptides which may be used to prevent HIV infection of T cells. AAY90212 is a modified version of a human IGE (immunoglobulin E) CH3 domain, and AAY90213-Y90219 are Th epitope/IGE CH3 antigenic peptides which may be used in the treatment of allergies. AAY91220 is a peptide derived from foot and mouth disease virus (FMDV) CW1 capsid protein and AAY91221-Y91222 comparise this peptide and a Th epitope. AAY91223 is a Plasmodium falciparum circumsporozoite (CS) target
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to novel promiscuous T helper cell epitopes (Th), along with B cell epitopes. The The pitopes of the invention along with B cell epitopes. The The pitopes and peptide immunogens containing them, are used to induce a T helper cell response, specifically against Plasmodlum falciparum, cholesteryl ester transport protein (ETP) or HIV epitopes, but more generally against any pathogen, immunoreactive self-antigen or thmour andigen. The The pitopes and peptide immunogens may be used for prevention and/or treatment of infections (HIV, foot-and-mouth disease or malaria); for cancer immunotherapy; for inhibition of the action of luteinising hormone releasing hormone (LHRH) for contraception, treatment of hormone dependent cancer, prevention of boar taint in meat, and immunogen treating allergies or arteriosclerosis. Incorporation of a promiscuous of thortional in genetically diverse subjects) into an immunogen improves capacity to induce a strong T helper cell-mediated immune response, resulting in production of antibodies against a target antitone continue and pathogen derived T helper antitone and the pathogen and pathogen derived T helper antitone and the pathogen derived T helper antitoner and the pathogen of the pathogen and th
                                                                                                                                                                      Promiscuous T-cell epitope, measles virus F protein, MVF; hepatitis B virus surface antigon; HBV; immunopenic; B-cell epitope; luteinising hormone releasing hormone: LHRH; contraceptive; anticancer; somatostatin; growth promotion; CD4 receptor; HIV-1; antiviral; FMDV; foot and mouth disease virus; immunoploblin E; IgE; anti-allergic; Plasmodium falciparum; circumsporozoite; antimalarial; CEFP; cholesteryl ester transport protein; anti-arteriosclerotic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New artificial T helper cell epitope and derived immunogens with target antigenic site, for immunization against e.g. malaria, arteriosclerosis or human immune deficiency virus
